## **DETAILED ACTION**

Page 2

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

2. The abstract of the disclosure is objected to because it is longer than 150 words.

Correction is required. See MPEP § 608.01(b).

## Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Art Unit: 2193

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 19-33 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-19 of U.S. Patent No. 6,678,885. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims presented are merely a broad version of the patented claims.

## In the Claims;

Please cancel claims I -1 8 and add new claims 19 - 33 as follows:

19. (New) A system, comprising: a common generation file adapted to create a predefined output file compatible with each of a plurality of computing platforms;

See step (c) of '885.

and a compiler configured to compile the common generation file with a data file to generate the predefined output file,

See step (e) of '885.

wherein the data file has a predefined structure which is platform independent.

The difference in the present application and the patent is the Present application specifies that the data file is platform independent; while, the patent does not appear to care whether the data file is platform independent or not. Furthermore, it does not appear to matter since in via the compiler component the newly generated output file appears to be based on the specific compiler. Therefore, it does not appear to matter as in '885 what type is data file is used. Furthermore, see claim 14.

20. (New) The system according

See step (C) of claim 1 of '885.

Art Unit: 2193

to claim 19, wherein the common generation file is written in a lowest common denominator language utilized by each of the plurality of computing platforms.

- 21. (New) The system according to claim 19, wherein the common generation file is further adapted to accept as input a name of the data file, the predefined structure of the data file and a type of one of the plurality of computing platforms.
- This feature is inherent via claim 1 to ensure the appropriate file is input via step (a) and compiled via step (e).

22. (New) The system according to claim 19, wherein the data file is a modified data file.

See step (b) of claim 1.

23. (New) The system according to claim 22, wherein the common generation file is further adapted to...

See claim 8.

In reference to claims 24-25, the specific platforms utilized and the specific languages is considered a choice of design. Furthermore, the feature is considered taught via the plurality of platforms in claim 1 and the languages of claim 3.

As per claims 26-33, see claims 19-23 above.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to John Chavis whose telephone number is (571) 272-3720. The examiner can normally be reached on M-Th, 8:30am-5:00pm, EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kakali Chaki can be reached on (571) 272-3719. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
